

## Turkey Frying Stand assembly instructions.

Parts: 1 - Base                      1 - Rod  
          1 - Lifting handle    2 - 5/16" Stainless steel nuts

Our Turkey Frying Stand is designed so that it can be disassembled for cleaning, travel, and storage. The base, rod, and lifting handle are aluminum.

Assembly is very easy. The finished stand will look as pictured. The rod, with one nut screwed on the threads, is inserted through the hole in the center of the base. Make sure the plate is on top and angles are on the bottom. Screw the second Stainless steel nut onto rod making sure that you only fill the nut (do not let the rod extend below the bottom of the bottom nut). If you allow the rod to extend below the bottom nut, the stand will not sit level. Tighten the top nut until the rod is firmly attached to base. The short end of the lifting handle hooks in the eye on the rod and the long end is the end you hold in your hand.

Our stand was sized for our 40 quart pot which is 14" in diameter. If your pot is smaller you may cut the angles to fit your pot. Remember the more you cut off the less stable the stand will be when standing outside the pot.
